FOR IMMEDIATE RELEASE

May 24, 2017

RENEWABLE ENERGY INNOVATIONS ENGINEERS VISIT WITH CITY WASTEWATER TREATMENT PLANTS AND DAIRY – AG FARMS IN MOSIDA AND ELBERTA

- REI engineers and technology partners arrive in Utah to meet with city wastewater treatment plants and speak to their operators to begin pre-engineering.
- Site visits also included meetings with Bateman Ranch, the largest dairy in Utah and the Elberta dairy owned by the LDS Church.
- The Engineers also saw potential land that future facilities could be built on.

PROVO, UTAH, May 24, 2017--(BUSINESS WIRE)—Today REI engineers and technology providers arrived in Utah to do site visits and talk to the operators of city wastewater treatment plants, dairy and ag-farmers and see potential sites where facilities may be built.

“This is an important beginning to the Utah Lake Regional Initiative.” said Randy Lutz, CEO of Renewable Energy Innovations. “To see existing facilities, talk to their operators and gather together to begin the design of sustainable solutions that will support and sustain the Utah Lake Regional Initiative is exciting.”

“The goals are to take Utah Lake and help restore it to its original status; back in the day it was an extremely popular lake,” said Eric Ellis, Executive Director Utah Lake Commission.

The collaborative effort has been seen through two Utah Lake Summit Conferences for the first time this year and through the creation of Utah Lake Technical Committee which has a representative from each city mayor and meets regularly.

About Renewable Energy Innovations

Renewable Energy Innovations provides a wide array of technologies from all over the globe to help clean-up the environment – land, water and air. REI has assembled the brightest minds and best of technologies known today. These technologies include biological, chemical, thermal, mechanical, solar and wind.

REI

Renewable Energy Innovations

As a renewable energy developer, REI brings proven sustainable emission-free solutions that will decrease our dependence on crude oil, generate energy from new eco-friendly sources and protect our environment.

Cautionary Statement: Statements of future events or conditions in this release are forward-looking statements. Actual future results, including the timing, results and impact of new technologies, could differ significantly depending on the outcome of further research and testing; the development and competitiveness of alternative technologies; the ability to develop and scale pilot projects on a cost-effective basis; political and regulatory developments.

About Utah Lake Commission

The Utah Lake Commission, a government agency funded and empowered by 17 area governments, including neighboring municipalities of Utah County, the Department of Natural Resources, and the great state of Utah.

Its purpose is to help the public get the most of Utah Lake, one of the State's largest natural treasures. The website, utahlakecommission.org, serves as a public portal to help promote, inform, sustain, and protect the Lake.

Founded in 2007 by an authorized exploratory committee, and using the Master Plan as a road map, the Commission hopes to promote multiple public uses of the lake, facilitate orderly planning and development in and around the lake, and enable individual Commission members to govern their own areas.
